

ANSARI SOMAN

Software Developer | Full-Stack Developer (MERN)

Bhiwandi, India • +91 9322160429 • ansarisoman4077@gmail.com
linkedin.com/in/ansari-soman • portfolio.somanansari.xyz

Technical Skills

Languages: JavaScript

Frontend: React.js, Tailwind CSS, Bootstrap, Framer Motion

Backend: Node.js, Express.js

Database: MongoDB

Tools: Git, GitHub, VS Code

Experience

Cloudsmaya Private Limited — Software Developer | July 2026 – Present

- Working on a **low-code/no-code application platform** used to build backend systems through configuration and scripting.
- Configure and maintain **database tables, columns, roles, and user access controls** based on application requirements.
- Perform **functional and integration testing** across application modules to validate data flows and business rules.
- Implement and work with **entity relationships**, including one-to-many and many-to-many mappings.

Cloudsmaya Private Limited — Internship, Web/Application Platform | July 2024 – December 2024

- Worked on a low-code application platform similar to ServiceNow, supporting configuration, scripting, testing, and data modeling.
 - Wrote custom scripts to transform and validate data during ingestion and processing.
 - Participated in system design discussions, gaining exposure to **HLD and LLD** concepts.
-

Projects

Full-Stack Todo

- Architected a production-oriented authentication system for a MERN application, emphasizing security, scalability, and clear ownership boundaries.
- Implemented OTP-based onboarding, secure login/logout, and password recovery using hashed opaque reset tokens with expiry and revocation handling.
- Designed a frontend auth state machine and reusable route guards/access wrappers to enforce authorization rules at the UI layer.
- Applied domain-driven design principles to separate authentication, user management, and business logic.

Expense Tracker

- Built a data-driven expense tracking application with an interactive analytics dashboard using Recharts to visualize income vs expense trends.
- Enabled users to record income and expenses and analyze spending patterns over 30-day and 60-day time windows.
- Built RESTful APIs to manage income and expense records with user-level data isolation.
